

THE REALITY CHECK

Andhra Pradesh Education, Employment & AI Transition Report

Why this matters:

Across Andhra Pradesh, thousands of students are pushed into MPC or BiPC streams without alignment to their interests or abilities. The result is a growing cycle of academic disengagement, unemployment, and vulnerability in an AI-driven economy.

Year	Secondary School Dropout Rate
2019–20	37.6% (Peak)
2021–22	16.7%
2023–24	16.3%
India Average 2023–24	8.2%

24% — Andhra Pradesh recorded the highest graduate unemployment rate among large Indian states in PLFS 2022–23.

JEE & NEET: THE COMPETITION BOTTLENECK

JEE Advanced 2023

- 180,372 students appeared
- 43,773 qualified (~24%)
- 136,599 students did not clear the exam

For most MPC students, the IIT pathway statistically remains extremely narrow.

NEET 2025

- 22,09,318 students appeared
- 12,36,531 qualified (~56%)
- Only ~8% of qualifiers secure a government MBBS seat

The Vicious Cycle

1. Family pressure pushes engineering or medicine.
2. Students enter streams they do not connect with.
3. Rote learning replaces curiosity.
4. Entrance exams become the only target.
5. Failure leaves no backup plan.
6. Unemployment damages confidence.
7. The same expectations repeat generationally.

AI DISRUPTION & THE FUTURE OF WORK

AI & Automation Statistics

- 86% of data entry tasks are technically automatable today
- 92 million jobs displaced globally by 2030
- 170 million new jobs expected globally
- 41% of employers plan workforce reductions due to AI
- 280 million Indian workers exposed to automation by 2030
- IMF estimates 40% of jobs face meaningful AI exposure

What this means:

Traditional fallback careers based on repetitive work are shrinking. Future resilience will depend on creativity, adaptability, communication, digital fluency, and portfolio-based skills.

The future advantage is no longer memorisation.

The advantage is proof of work, creativity, and adaptable skills.

CREATOR ECONOMY & INTERVENTION MODEL

India's Creator Economy

- 962,000 creators in 2020 → 4.06 million in 2024
- \$976 million industry in 2023 → projected \$3.93 billion by 2030
- YouTube India ecosystem contributed \$1.8B to GDP and 930,000 jobs in 2024
- Influencers impacted \$350–400B in consumer spending in 2024

Proposed Intervention Point

Target Stage: **9th–10th Grade**

Pilot Scale: **80 students in Kurnool**

Dual-Track Model

- Academic support
- Portfolio creation
- AI & digital literacy
- Communication skills
- Creative exploration
- Career optionality before stream selection

Key Message:

The objective is not to discourage engineering or medicine. The objective is to ensure students have direction, skills, and optionality even if traditional exam pathways fail.
